

LIGHTING

the Strawberry Mountain & Ochoco fuel bricks

- 1** Place brick(s) on existing coals or fire OR place 3, 4 or 5 bricks in a crisscross manner as illustrated above.
- 2** Loosely roll 1 to 3 pieces of paper crushing the end to add density. Insert into opening at bottom and turn the end of the papers up at the center.
- 3** Light paper at the bottom of stack. If you are using fire starter, place in center of stack.

***A 5 brick stack creates the best draft and flame
and is well suited for campfires***

- STORE BRICKS IN A DRY AREA -

**CAUTION: Bricks burn hotter than firewood. ONLY burn enough bricks to produce a safe level of heat for the stove, fireplace or appliance being used.*
